## SunShine – Quick Start for DEMO

1. Run *SunShine* file
2. First simulated structure is uploaded automatically. You can browse the menus in full extend to see the settings of the simulation. Any change in the settings will not affect the results in Demo version.
3. Press Run to upload the simulated results for particular structure and settings.
4. To upload a new structure press File -> Open Input File and select a desired structure. There are four solar cell structures prepared in the demo version (CIS, organic, multijunction thin-film silicon, and perovskite/silicon tandem)

For any detailed information about the menus and complete software see  
Help -> User Manual.

To test the complete version visit  
<http://lpvo.fe.uni-lj.si/en/software/sunshine/>

We wish you a successful testing of our simulators!
